

2019 Annual Report Erratum #1

Amended 29 November 2019 for the printed version of the 2019 ANZHFR Annual Report

Figure 59 Return to preadmission mobility at 120 days

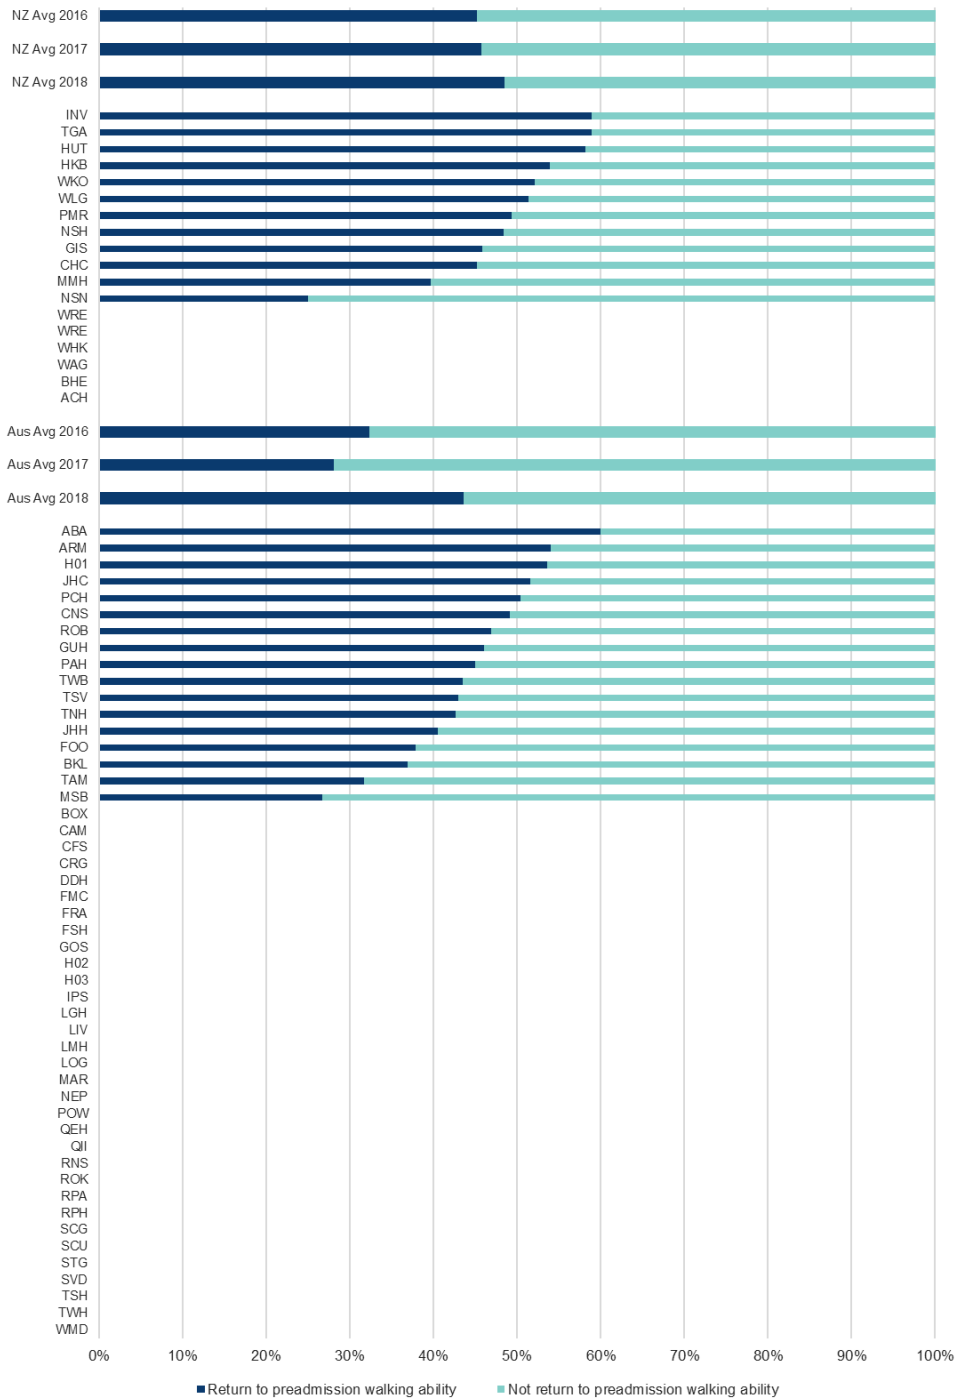

Hospital proportions were not displayed correctly

Original figure:

From a patient perspective, the recovery of function including mobility is a critical outcome following a hip fracture. Mobility at 30 days after presentation is not reported as this is early in the course of recovery. Of those followed up at 120 days in 2018, 21% of patients in New Zealand and 24% of patients in Australia have returned to their pre-injury level of mobility.

Corrected figure:
Figure with correctly displayed hospital proportions

From a patient perspective, the recovery of function including mobility is a critical outcome following a hip fracture. Mobility at 30 days after presentation is not reported as this is early in the course of recovery. Of those followed up at 120 days in 2018, 49% of patients in New Zealand and 44% of patients in Australia have returned to their pre-injury level of mobility.
